

JEF

**Delivering Excellence
Since 1994**

Partner with Asia's Leading Expert in Electrical Engineering

JEF is an innovative company with Indian roots and an extensive international presence across 21+ countries in the ASEAN, Middle Eastern, African and European regions. We have been the preferred vendor for prestigious projects in many countries with 3000+ global customers and an astounding 90% customer retention rate.

With over 28 years in the industry, we have a proven track record of successfully implementing several engineering solutions.

Our services span the entire spectrum of electrical engineering from low, medium to high voltage and extra high voltage.

Over the last couple of decades, JEF has supported organizations across a range of industries to help ensure the safety of their manpower and reliability of their systems.

With us you can always expect a technology-driven approach. We have several innovations, patents, and industry firsts which have made us a preferred partner for customers.

The background of the entire page is a close-up photograph of a hand placing a wooden block with a black upward-pointing arrow on top of another wooden block. The image is overlaid with a semi-transparent red filter. The JEF logo is in the top right corner.

JEF

This Global Recognition, Expertise and Growth Has Been Hard Earned.

■ 28+ Years of Experience

■ 3000+ Global Customers

■ 21+ Countries

■ 30% Growth Rate

■ 90% Customer Retention Rate

■ 200+ employees

Integrating Diverse Specializations for Value Delivery

Our vast experience, innovative approach and ability to respond to customers' needs across diverse applications have helped build significant knowledge and expertise.

The diverse specializations within our team ensure a multi-dimensional approach to problem solving, thereby positioning us as a competent and reliable full service vendor partner in the electrical engineering space.

Seamlessly combining the best of:

- High Voltage Engineering
- Instrumentation Systems
- Lightning Protection
- Grounding
- Transients (IC studies)
- Power System studies
- Root Cause Analysis and Power Quality Studies
- Electromagnetic Interference Compatibility

Building a Legacy for an Exciting Future

**Striving for
Excellence in All We Do
Has Been Our Guiding Motto**

Not often you hear about organizations wanting to build a Legacy.

Passion, Commitment, Values, Leadership, Excellence, Consistency and a lot more go into building one.

Nearly three decades of handling challenging assignments across geographies and varied industry segments has helped us build a unique archive of designs, drawings, technical papers, customized tools and programs to help solve complex present day electrical engineering problems.

Our multi locational teams frequently leverage these to embrace the challenges and opportunities thrown at us everyday.

We are poised and ready for an exciting future.

The JEF Non-negotiables

Integrity

Defines us as an organization for our customers and team members.

Dependable

You can count on us to get the job done.

Transparency

Offering a very transparent approach that you would expect from a partner of choice.

Innovation

We design and implement innovative and cutting-edge solutions.

Customer-Centered Service

We work together with customers to understand problems, needs and challenges to deliver best-suited solutions.

Delivering Excellence across 21+ Countries

Project locations across

📍 Asia

Iraq
Bhutan
Bangladesh
Vietnam
Singapore

📍 GCC

Saudi Arabia
Kuwait
Bahrain
Qatar
UAE

📍 Africa

Tanzania
Algeria
Nigeria
Egypt
Mauritius

📍 Europe

Austria

Earthing & LPS Products

We have a comprehensive range of Earthing and LPS products, as well as the resources, scale, and agility to deliver your projects efficiently at the best value. Our channel partner network and strategically located offices provide us unparalleled reach across India. We have been a trusted partner for a diverse range of customers across industries - Renewable Energy, Commercial, Residential Buildings, Data Centres, Oil and Gas, Railways and more.

Our customer-centered approach and a thorough knowledge of the nuances of various applications helps us to provide the best solutions for your requirements which are cost optimum, technically superior and compliant with relevant regulations.

Design

The revolutionary software, developed in-house, “JEF Shield” which is available to registered users, provides comprehensive risk assessment report, optimized design, BOQ, indicative 2D and 3D drawings as per IEC 62305 for most applications in <99 seconds. Detailed drawings can also be provided on request.

Grounding designs for most applications are carried out through CDEGS software with level II certified professionals.

Products

With a range of over 600+ products tested as per the stringent requirements of IEC 62561 (62305) and other relevant standards, we have the range to address the needs of diverse applications.

Surge Protection Devices

We offer a vast range of products for the protection of all your sensitive electronic equipment. The range includes low voltage electrical and instrumentation and SPDs with Ex certifications.

Installation

Our in-house installation team is fully trained, certified and strategically spread out throughout India. This helps us deliver your projects cost efficiently and in time.

600+ Certified Products for Reliable Lightning Protection and Grounding Systems

Straight Splicer

Expansion Piece

Air Terminal

Universal Cross - T Splicer

I-Beam Connector

Compounding Plant

Strike Pad

Strip Holder

Air Terminal Base

Universal Rebar Clamp

Standing Seam Clamp

Test link

Cross Splicer

Earth Electrodes

JEF Eco Safe Set

Compound type tested as per IEC-62561-7, IS3043-2018, BS-7430 and IEEE 80.

Resistivity <math><0.12 \Omega m</math>

Complete range of type-tested LPS components as per IEC 62561(62305). Sequentially type tested for aging, (10/350 μ s) 100kA lightning impulse, mechanical test.

Certified By

Technical & Engineering Services

Electrical systems need to be safe and reliable to ensure critical processes in industries, run without interruptions.

Yet, they invariably experience outages due to tripping and equipment failures. The importance of proper design, periodic health analysis of equipment, study of the interplay between various equipment in the system under varied operating conditions are necessary to ensure safe and reliable system operation.

Our highly trained, skilled and experienced team delivers all services related to the electrical system to proactively ensure system reliability, find the root cause and suggest corrective action.

Safety of personnel...

Reliability of your system.

Grounding

Most grounding systems are permanently buried and not visible/accessible for maintenance.

How can we know the health of a buried system??

Our team of experts perform specialized tests such as riser and grid integrity test which offer a comprehensive view of the grounding system both above and below the ground.

We also design grounding system for high soil resistivity areas and special applications using CDEGS.

Application Areas

Power Plants | AIS | GIS | Process Plants | Oil & Gas & many more.

Lightning Protection System

Failure of electronics and risk to personnel during lightning is commonly experienced across industries. We offer comprehensive study of existing LPS system for its adequacy and suggest augmentation measures as a retrofit to ensure compliance and safety. The study covers safety of structures, people and equipment. We also design LPS systems for new facilities.

Application Areas

Warehouses | Pharmaceuticals | Airports | Stadiums | Railways & Metros | Heritage & Commercial Buildings & many more.

Electrical and Fire safety

Fire accidents originating from electrical faults are unfortunately occurring far too often.

Fully trained, certified experts based in our strategically located offices around the country offer inspection services that go beyond compliance. Aided by technology from our patented application “JEF Sameeksha” and the “Auditor’s Eye” of our trained engineers, we ensure that every equipment and the total system is inspected and analysed from all perspectives for safety and compliance.

Application Areas

Retail Outlets | Department & Apparel Stores | Super Markets | Warehouses | Industries | Hospitals | & many more

Root Cause Analysis and Power Quality

Electrical systems often suffer from tripping or failures, disrupting critical processes and causing significant losses. Quality of power as seen by the equipment is generally the culprit. Sags, swells, surges and harmonics can damage your critical equipment and systems or cause them to malfunction.

Our highly knowledgeable and experienced professionals measure, analyse and decipher the cause of the problem and provide the right solutions to your problems using precise analyzers and sophisticated software. Our track record of solving complex problems in varied industry segments is testimony to our prowess.

Application Areas

Power Plants | Substations | Energy Complexes | Onshore facilities & many more

Power System Studies

Electrical system performance is dictated by the interplay of its connected equipment and their operating conditions. Proper simulation design and analysis is key to reliable system operation.

Our experts with vast experience across varied applications recommend the most optimum configuration and design for your electrical system to help ensure safe and reliable operations using reputed tools like ETAP, DIG silent, PSCAD and more. Our unique value proposition of **measure-simulate-validate** offers a 360-degree perspective and foolproof solution under actual operating conditions.

Application Areas

Wind & Solar Farms | Substations | Hydro Power Stations | Gas Power Stations | Data Centers & many more.

HV & EHV Services

High Voltage and Extra High Voltage are the backbone of electricity transmission.

Our experts from varied teams offer:

- a) Detailed design and engineering including civil and electrical.
- b) Seismic and integrated analysis using ANSI (for GIS)
- c) Insulation co-ordination and Transient Stability Studies (EMTP/PSCAD)
- d) Dynamic Stability and Grid Interconnection Studies.

Application Areas

Solar | Wind | Transmission Lines | Substations | Power Plants & many more.

JEF

Leading Innovation through First-of-Its-Kind Solutions

JEF Sameeksha is the world's first automated safety audit tool-developed and patented by JEF. It is a unique, AI-based, automated safety audit tool used for the detection of anomalies to reduce the dependency on human skill and generate accurate audit reports to help ensure safety across all the locations.

JEF Shield is a web-based risk assessment tool to determine the risk level as per IS/ IEC62305-2. The tool gives a comprehensive risk assessment report, optimized design, BOQ, indicative 2D & 3D drawings as per IEC 62305 for most applications in <99 seconds.

JEF E-Build is an automated tool to guide and monitor LPS site installation. The tool can be used by unskilled or semi-skilled workers as well during the LPS site installation under the supervision of back-end experts, who validate the process in real-time and certify the installation remotely.

Delivering Quality Solutions to Prestigious Projects

7500+ and counting!

Kempegowda International
Airport's Terminal 2 - Bangalore, Karnataka
